AlphaGUARD radon monitor- versatile monitoring tool

Handheld instrument for locating the source of radioactive material

The RS-111 HANDY SCINT is a compact hand held radiation detector specially designed to quickly determine the location of radioactive material. The highly sensitive instrument comes with or without a telescopic arm, and is ideal for the scanning of personnel, items, and metal scrap.

Radon Surveys

- Local and regional wide risk maps
- Public Planning
- Belowground installations and mines
- Soil and rock formations

Radon Risk Map

Inspection of Gamma Radiation

- Scrap metal and other material
- Alum-shale- based concrete in buildings
- Assessment of gamma and radium index in concrete ballast
